PROFILE

Software engineer with experience owning monetization, personalization, and backend systems for a live mobile game, including a 950+ offer personalization engine and a self-hosted build/release automation pipeline. Leads Kitab, a side-project education platform that has reached +44,000 students, including an AI productivity assistant used by 70+ instructors across 60 city branches. Currently an MBA student in Innovation & Entrepreneurship at Tel Aviv University's Collier School of Management.

EXPERIENCE

Software Engineer, Obscure Games | Dec 2021 - Present

- Own the game's monetization stack end-to-end: in-app purchases, ads, and transaction systems, including a personalized offer engine that scales to 950+ distinct offers, tailored per player from prior behavior and purchase history, on a game with 28% D1 retention.
- Integrated App Store and Google Play subscription billing (recurring IAP) and built the surrounding business logic (renewals, entitlements) for a second title in the studio's multi-publisher game portfolio.
- Designed a self-hosted CI/CD pipeline for Android and iOS releases that automatically traces build failures to the responsible code change via git history, opens a fix PR for straightforward cases, and notifies the owning developer.
- Built and ran A/B testing infrastructure used across the game to validate monetization and gameplay changes, driving measurable gains in retention and ROAS.
- Developed personalized, DFS-based AI opponent logic (~2,500 lines) that adapts to player skill, contributing to retention.
- Built internal LiveOps dashboards and player-facing in-game web UI (React, TypeScript, Python); integrated cloud infrastructure across AWS, Azure (Docker/Kubernetes for multiplayer session hosting), Google Cloud Platform, and PlayFab, with analytics via Snowflake and AppsFlyer.
- Joined as the studio's 5th hire (3 founders + 2 employees); grew with the company to a ~20-person, internationally distributed team.

Project Lead, Kitab (side project) | 2020 - Present

- Lead a side-project education platform helping students navigate college admissions, managing a team of 4 plus 10+ volunteers across content, community, and development.
- Led full-stack development (Node.js, React/Next.js, Flutter/Dart, MongoDB, Firebase, AWS S3) alongside the team, shipping web, iOS, and Android apps that reached +44,000 students, +240,000 views, and a +5,000 member active community.
- Built Smart Assistant, an AI advising tool using retrieval-augmented generation (RAG) over a custom knowledge base covering 35 colleges and +250 college programs, answering +10,000 student questions.
- Delivered a two-year paid partnership with Rowad (an organization expanding access to higher education) that became Kitab's sole source of revenue, building an AI assistant used by 70+ instructors across 60 city branches through biweekly collaboration reviews.

EDUCATION

MBA, Tel Aviv University | Sep 2026 - Present

Master of Business Administration, Collier School of Management, Innovation & Entrepreneurship

B.Sc. Computer Science | 2019 - 2023

Additional training: Stanford Online Supervised ML (2021) · Udemy Microservices, Node/React (2022) · Vector Advanced Game Dev, Tel Aviv (2023)

SKILLS

- **Languages & Frameworks:** C#, Unity, TypeScript, JavaScript, Python, Node.js, React/Next.js, Flutter/Dart
- **Cloud & Infrastructure:** AWS, Azure (Docker, Kubernetes), Google Cloud Platform, Firebase, PlayFab
- **Data & Product:** Snowflake, AppsFlyer, MongoDB, Vector Databases, A/B Testing, LiveOps & Game Economy, Monetization (IAP & Ads)

LANGUAGES

Arabic (native) · Hebrew (native) · English (fluent)
